Radiant Lumina™ Skin Diagnostic System

Professional Facial Imaging + 10-Mode Skin Performance Analysis

Meet Radiant Lumina™ – the next evolution in intelligent skin diagnostics. Designed for high-performance clinics and luxury aesthetic studios, Lumina combines advanced multi-spectral imaging with intuitive software to reveal what the eye can't see, turning every consultation into a precise, confidence-building roadmap for transformation.

STANDARD LIGHT

CROSS-POLARIZED

UV-STYLE

From sun damage hiding beneath the surface to pore congestion and redness patterns, Radiant Lumina delivers a 360° skin story in seconds, helping you communicate results clearly, recommend treatments accurately, and track change over time with undeniable visual proof.

What Radiant Lumina Does?

Radiant Lumina captures high-resolution facial images using standard, cross-polarized, and UV-style illumination to analyze skin from surface to sub-surface layers. The system then generates an easy-to-read report with visual overlays, comparative scoring, and progress tracking.

Think of it as your clinic's truth mirror – objective, consistent, and impressively detailed.
